Re: Mr. John Herklotz (D.O.B. 04/07/1924)

To Whom It May Concern:

Mr. John Herklotz has been receiving his medical care through our clinic since 1999. Mr. Herklotz is followed for diabetes mellitus, prostate cancer, neuropathy, B12 deficiency, arrhythmia and osteoporosis among others. He is also currently being evaluated for persistent (since October 2005) dizziness and fatigue which affect his endurance and limits his activities. Mr. Herklotz was also recently evaluated for difficulty with his gait (wide based gait and shuffling) which may increase his risk of falling and limit his activities.

Due to his multiple medical problems and unresolved dizziness and fatigue, Mr. Herklotz has been referred to the appropriate consultants and he is advised to limit his activities and travel.

Thank you in advance for your consideration.

Sincerely

Wadie Najm, MD, MSED
Clinical Professor
Family Medicine & Geriatrics
